EXPERIMENT 4

Data Modelling and Form Design for an Student Admission Application

Student Admission Request & Processing Management | Zoho Creator

Objective

Designtheclaim form and its data fields so that claim requests can be captured consistently and reviewed efficiently.

Platform / Application

Platform: Zoho Creator. Application: Student Admission Command Center / Student Admission Request & Processing Management. Primary form: Admission_Request_Form. The LC-09 specification and supplied application export were used as the project context.

Theory

Aform model defines fields, field types, required values and relationships. The supplied LC-09 specification names Admission_Request_Form and describes applicant, contact, application, scheduling and declaration sections. The supplied app export also includes status, evidence and admission-related fields.

Procedure

1. Create or inspect the Admission_Request_Form.

2. Group fields into Applicant Details, Contact Details, candidate Details, and Scheduling & Declaration.

3. Add the 13 basic fields specified in LC-09: Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select and Checkbox.

4. Apply required-field and type validation; restrict claim amount to positive values and prevent future incident dates where supported.

5. Review the provided app export for additional fields such as Applicant_ID, Applicant_Status, Admission_Photo, Receipt_Upload and Net_Payable_Amount.

Design / Observation Table

Section	Example fields
Candidate details	Candidate_Name, Course_Type, Admission_Number
Contact details	Email_Address, Contact_Number, Residential_Address ,
Candidate details	Date_Of_Admission, Fee_Amount_Requested, Supporting_Documents_Available, Student_Description
Scheduling / declaration	Preferred_Callback_Time, Declaration_Of_Authenticity

Result / Conclusion

Astructured claim form reduces missing information and creates a consistent record for filtering, verification and assignment. Keep field names consistent across forms, reports and workflows.

Implementation note

This is a lab-record document tailored to the insurance-claim application. Steps describing integrations, AI, security, deployment or automation are guidance to configure and verify in the live Zoho Creator account; they should not be treated as proof that a feature is already enabled.
